

Getting Started

Michael Kagan
SLAC

Slides adapted from: J. Ngadiuba

We will use Github for accessing the project code. For a full tutorial, see [here](#)

To get started:

1. Create Github account: <https://github.com/>
2. Got to the [project repository](#) and fork it
 - A fork is a copy of the repository (repo) in your own account, allowing you to edit and experiment without changing original repo.
